

# Uroflow Problems?

## We have the solution.

Problem	Solution
 <p>Patients show up for uroflow tests unprepared to void. Some patients can't provide enough urine for an accurate test. The office flow gets disrupted.</p>	<p>UroGenie fits on any toilet. It can be used in the office or comfortably in the patient home on any convenient schedule.</p> 
 <p>Emptying the beaker is annoying and requires PPE.</p>	<p>UroGenie doesn't require emptying. Simply rinse it out and it's ready for the next uroflow test.</p> 
 <p>Printing and scanning every uroflow test result is outdated, time consuming, and prone to user error. The paper test results get lost all the time.</p>	<p>The UroGenie sends uroflow results instantly and securely over the cloud to patient EMR. Keeping a home voiding diary is extremely easy with the UroGenie.</p> 
 <p>Viewing historical uroflow test results is a laborious process.</p>	<p>UroGenie sorts all patient results in the EMR. Older test results are as easy to find as operating an email inbox. Just search, click, and view.</p> 
 <p>Urologists are limited in the total of uroflows they can do per day. The result is capped earnings and inadequate patient care.</p>	<p>By taking uroflow out of the office and into the patient's home, providers can prescribe unlimited uroflow tests. Patients provide uroflows from the comfort of home.</p> 
 <p>Adults and kids have anxiety voiding in public places. Lack of comfort leads to inaccurate uroflow results.</p>	<p>UroGenie enables patients to do uroflows in the comfort of their own home. This provides the most accurate and realistic test results.</p>
